### Abstract

In this study, we examine the major components of E-agreements along with major issues in commercialization of E-agreements, look at their final points, and suggest what is the appropriate time for improvement for the expansion of the recent E-agreements. It is the purpose of this study.

This paper limits the scope of research to issues related to the establishment of an electronic trade contract through electronic means, and considers it a comprehensive electronic contract without separating some and all cases. In addition, there are several model contracts necessary for signing electronic trade contracts, but among them, smart contracts using blockchain methods were reviewed with the analysis of the composition of E-agreement as the main research subject.

Keywords: Electronic Trade, E-Agreement, Electronic Means, Blockchain, Smart Contract
